

AI reinvention made real

Accenture Innovation Challenge 2026

Team details

TEAM NAME: InsightForge

Muggu Jaya Sree (Team Leader)

College: Indian Institute of Technology Indore
Stream: Metallurgical Engineering and Materials Science
Year of graduation: 2027

Describe the problem statement (200 words)

Business Intelligence: From “What Happened?” to “Why and What Next?”

THE GAP

Business dashboards show **WHAT** changed, but rarely explain **WHY** it changed or **WHAT** action should follow.

Example: A dashboard may show regional revenue dropped by 8%, but finding the reason still requires manual investigation.

Sales Data

Customer Feedback

Operations Reports

Market Trends

Pricing & Promotions

Analyst manually investigates multiple sources

Hours / Days

Decision delayed

THE CHALLENGE

Multiple Data Sources

Analysts must connect fragmented **structured** and **unstructured data**.

Signal vs. Noise

Normal fluctuations can be mistaken for meaningful changes, leading to **false alarms** or missed issues.

CORRELATION ≠ CAUSATION

It is easy to confuse correlation with causation, resulting in **incorrect** conclusions and misguided actions.

WHAT BUSINESSES NEED

An intelligent KPI storytelling engine that can:

DETECT

Meaningful changes

INVESTIGATE

Likely drivers

COMBINE

Structured +
Unstructured data

EXPLAIN

The story in natural
language

RECOMMEND

Next steps

The system should also **communicate uncertainty** when **evidence** is insufficient, rather than generating unsupported conclusions, while keeping the **final decision** with the **human**.

Proposed solution (200 words) : KPI Storytelling Engine

HOW IT WORKS

1 DETECT

SQL + ML / Statistical Analysis

Signal Detection

Identify meaningful changes and separate signal from normal variation.

2 INVESTIGATE

KPI / Driver Analysis

Driver Analysis

Break down KPI changes across key business dimensions to identify and rank likely drivers.

3 COMBINE EVIDENCE

Structured Data + Unstructured Data

Evidence Sources

- Sales Data
- CRM/ Customer Feedback
- Operations Data
- Reports / Market Data

4 EXPLAIN

LLM + Evidence Layer

Key Insight

Generate an evidence-backed explanation with confidence and uncertainty.

5 RECOMMEND

Next Best Action

Recommended Actions

- ✓ Review pricing strategy
- ✓ Address top customer issues
- ✓ Monitor impact over time

SOLUTION ARCHITECTURE

DATA SOURCES

- Sales & Finance
- CRM & Feedback
- Operations
- Market data

INGEST & PREPROCESS

- Data Ingestion
- Cleaning
- Feature Engineering

AI & ANALYTICS

- Change Detection
- Driver Analysis
- Ranking

STORY & ACTION

- Insight Generation
- Natural Language Narrative
- Recommendations
- Uncertainty

DELIVERY

- Dashboards
- Alerts
- Reports
- APIs

EXAMPLE OUTPUT

KPI: Customer Churn
Period: Q2 2025
Change: +12%

Key Drivers

- Support delays ↑ 28%
- Product usage ↓ 19%
- Renewal rate ↓ 15%

AI Insight

Enterprise customers are churning primarily due to service delays and unresolved issues.

Recommended Action

Prioritize at-risk customers and resolve recurring support issues.

Confidence: Medium | Human Review Recommended

Thank you
